

DUST CONTROL

Update (June 28, 2012)

The excessively dry weather is making the road dust problem more severe this summer. I have inquired of our contracted dust control applicator, Great Lakes Chloride, Inc., to determine when we may expect the next product application. The Great Lakes Chloride, Inc., representative has told me that the second application of the dust control product (calcium chloride) is current scheduled for Friday, July 13, 2012.

The Ottawa County Road Commission grading crew is expected to be able to grade the county roads in Blendon Township on the second week of July and the contractor for the dust control product is expecting to spread the product on the roads by the end of that same week, weather permitting.

Questions regarding the dust control program in Blendon Township should be directed to the Supervisor, Larry Ver Hage at (616) 875-7707 or via email: twpsuper@centurytel.net.
