

1 My Elected Representatives

The My Elected Representatives web application allows members of the public to look up their elected representatives from the federal, state and local levels.

The application opens to the “Find My Elected Representatives” widget. As you type an address into the search box, suggestions will appear below.

You can also use the Location tool to place a location on the map.

The map will zoom to the address point once it has been selected and the right side of the screen will fill with results for that address point. Once the results are listed, you can select each one for information about the elected representative(s) including term length, term expiration date, and contact information if available.

Use the Back Arrow button to return to the original list of results.

The Search Nearby button lets you see search results for nearby districts and where your district stands in comparison with others.
